

UTT/UTT-A Cam Switch Upgrade Assembly

DUPLICATE FUNCTION, MORE ROBUST DESIGN

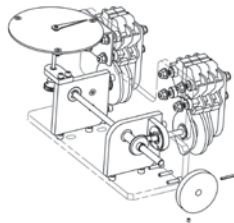

Designed as an economical and functional direct replacement for the OEM assembly, this re-engineered cam switch assembly for Westinghouse's UTT and UTT-A Load Tap Changers offers precision-matched gears and all ball bearing construction for smooth, no-slip operation. This completely redesigned unit features a new electrical cam switch and can be "dropped in" without any modifications for quick and easy installation.

IMPROVED SOLUTION FOR OEM REPLACEMENT

- High precision gear mechanism reduces/eliminates slippage
- Simplified, robust design includes an SPX Transformer Solutions' proprietary electrical cam switch with silver-to-silver contact points for lower contact resistance (electrical switch also sold separately)

QUICK INSTALLATION

- Complete, "drop in" replacement includes all new cams, electrical switches and drive gear
- Utilizes existing OEM wire harness
- Factory-timed; no modifications necessary

EASY TIMING CALIBRATION

Position indicators and switches' electrical states are silk-screened directly on the unit's faceplate for easy timing verifications.

ALL UNITS ARE BENCH-TIMED BEFORE SHIPMENT FOR COMPLETE ACCURACY WHEN INSTALLED.

PART NO. 2000-1339

PART NO. 2000-1299

PART NO. 2000-1299

UTT/UTT-A Cam Switch Upgrade Assembly ships complete with all new cams, electrical switches and drive gear; *wire harness NOT included.*

PART NO. 2000-1339

New Electrical Cam Switch (also sold separately—close-up shown in inset photo above)

Custom solutions for other LTC models available upon request, including switches for UTTA-70 and UTT-B.
